SkinKit magnet template

PRINT AT 100% / ACTUAL SIZE
Not "Fit to page". Check the scale below.

For Step 9 "Add the magnets". One sheet: magnet strips for all five wire modules.

How to use

1. Cut a strip of double-sided tape about 10 x 28 mm (the blue box). Lay it sticky side up on a blue box.
2. With tweezers, put one magnet on each dot. Put every magnet on strip A with the same face up.
3. Make strip B the same way, but with every magnet flipped. Which face is N does not matter, only that A and B are opposite.
4. Lift each strip off and stick it on the wire module where its dashed square shows the circuit module will sit.

● Strip A: all magnets one face up ○ Strip B: all magnets flipped ⬚ Where the circuit module (0.8 in) sits

Dots match the six magnets on a circuit module: 2 mm magnets, 7.62 mm (0.3 in) apart in each strip; the two strips' dots are 15.24 mm (0.6 in) apart.

Scale check

If this page printed correctly, the square is exactly 1 inch and the ruler exactly 5 cm.
